Mutual Funds have investment risks including loss of principal. There is no guarantee the fund will meet its objective. In general, the price of a fixed income security falls when interest rates rise. There is a risk that issuers and counterparties will not make payments on securities and other investments held by the Fund, resulting in losses to the Fund. The Fund may invest in high yield securities, also known as "junk bonds." High yield securities provide greater income and opportunity for gain, but entail greater risk of loss of principal. Foreign common stocks and currency strategies will subject the Fund to currency trading risks that include market risk, credit risk and country risk. Municipal securities are subject to credit risk where a municipal security might not make interest and principal payments as they come due. The Advisor follows an investing style that favors value investments. At times when the value investing style is out of favor, the Fund may underperform other funds that use different investing styles. Investments in lesser-known, small and medium capitalization companies may be more vulnerable than larger, more established organizations. As with any investment, small and medium capitalization companies may be more vulnerable than larger, more established organizations. An unrested portfolio structure or fund performance consistent with any market index. Increased portfolio turnover may result in higher brokerage commissions, and other transaction costs may result in taxable capital gains.
